Lenexa, KS 66219

Re: National Mine Tailings Site Progress Report

Dear Mr. Gunter:

As required by Article VI, Section 51 of the Unilateral Administrative Order (Docket No.CERCLA-07-2006-0231) for the referenced project and on behalf of The Doe Run Company and NL Industries, Inc., the progress report for the period February 1, 2013 through February 28, 2013 is enclosed. If you have any questions or comments, please call me at 573-638-5020 or Mark Nations at 573-518-0800.

Sincerely,

Ty L. Morris, P.E., R.G.
Vice President

Removal Action - Monthly Progress Report
Period: February 1, 2013 – February 28, 2013

1. **Actions Performed and Problems Encountered This Period:**

   a. Work continued on the development of the Removal Action Report.

2. **Analytical Data and Results Received This Period:**

   a. During this period, water samples were collected at the sampling locations identified in Appendix C of the Removal Action Work Plan where water was present. Copies of the analytical results from the last sampling event are included with this progress report.

   b. During this period, the Ambient Air Monitoring Reports for Third Quarter 2012, October 2012, and November 2012 were completed. Any issues identified in these reports are discussed below. A copy of these documents has been sent to your attention.

   The Third Quarter 2012 Ambient Air Monitoring Report noted the following:
   - The action levels for lead and dust were not exceeded.
   - No samples were taken with the National #3 (Water Plant) TSP monitor on 07/02/12 due to mechanical failure. Upon discovery, the issue was corrected.
   - No samples were taken with the TSP monitors on 07/04/12 due to the holiday.
   - No samples were taken with the National #1 (Ozark) TSP monitor on 08/23/12 due to mechanical failure. Upon discovery, the issue was corrected.
   - No samples were taken with the TSP and PM_{10} monitors on 09/03/12 due to the holiday.
   - No samples were taken with the National #2 (Soccer Field) TSP monitor on 09/21/12 due to mechanical failure. Upon discovery, the issue was corrected.
   - No samples were taken with the Big River #4 (Primary) PM_{10} monitor on 09/21/12 due to mechanical failure. Upon discovery, the issue was corrected.

   The October 2012 Ambient Air Monitoring Report noted the following:
   - The action levels for lead and dust were not exceeded.
   - No sample was taken with the Big River #4 (Primary) PM_{10} monitor on 10/09/12 due to mechanical failure of the elapsed time indicator. Upon discovery, the issue was corrected.

   The November 2012 Ambient Air Monitoring Report noted the following:
   - The action levels for lead and dust were not exceeded.
   - No sample was taken with the Big River #4 (Primary) TSP monitor on 11/02/12 due to the filter being compromised by moisture during a storm event. Upon discovery, the issue was corrected.
   - The sample for Big River #4 (QA) PM_{10} monitor was invalid on 11/05/12 due to the elapsed run time being outside of the tolerances. Upon identifying the issue, timer and sampling procedures were evaluated and the issue was corrected.
   - No samples were taken with the TSP and PM_{10} monitors on 11/21/12, 11/22/12, and 11/23/12 due to the holiday.
   - A QA filter blank was completed on the Rivermines #3 (Water Treatment Plant) TSP and PM_{10} monitors on 11/27/12.

3. **Developments Anticipated and Work Scheduled for Next Period:**

   a. Complete work in the Mine Shaft Area.

   b. Continue developing the Removal Action Report.

   c. Complete monthly water sampling activities as described in the Removal Action Work Plan.

   d. Complete air monitoring activities as described in the Removal Action Work Plan.

4. **Changes in Personnel:**

   a. None.

5. Issues or Problems Arising This Period:

a. None.

6. Resolution of Issues or Problems Arising This Period:

a. None.

End of Monthly Progress Report

February 20, 2013

Allison Olds
Barr Engineering Company

RE: National Tailings Pile-Design & Construction **WorkOrder:** 13020611

Dear Allison Olds:

TEKLAB, INC received 2 samples on 2/13/2013 12:25:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Michael L. Austin
Project Manager

Client Project: National Tailings Pile-Design & Construction
Report Date: 20-Feb-13

This reporting package includes the following:

Client: Barr Engineering Company
Work Order: 13020611

Client Project: National Tailings Pile-Design & Construction
Report Date: 20-Feb-13

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MB	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
E - Value above quantitation range	H - Holding times exceeded
M - Manual Integration used to determine area response	ND - Not Detected at the Reporting Limit
R - RPD outside accepted recovery limits	S - Spike Recovery outside recovery limits
X - Value exceeds Maximum Contaminant Level

http://www.teklabinc.com/

Client: Barr Engineering Company
Work Order: 13020611
Client Project: National Tailings Pile-Design & Construction
Report Date: 20-Feb-13

Carrier: Rich Mannz
Received By: TB

Completed by: Emily E. Pohlman
On: 13-Feb-13

Reviewed by: Michael L. Austin
On: 13-Feb-13

Pages to follow: Chain of custody [1] Extra pages included [0]

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐		Temp °C	0.2	
Type of thermal preservation?	None ☐	Ice ☑	Blue Ice ☐		Dry Ice	☐	
Chain of custody present?	Yes ☑	No ☐					
Chain of custody signed when relinquished and received?	Yes ☑	No ☐					
Chain of custody agrees with sample labels?	Yes ☑	No ☐					
Samples in proper container/bottle?	Yes ☑	No ☐					
Sample containers intact?	Yes ☑	No ☐					
Sufficient sample volume for indicated test?	Yes ☑	No ☐					
All samples received within holding time?	Yes ☑	No ☐					
Reported field parameters measured:	Field ☐	Lab ☑	NA ☐				
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐					

When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.

Water – at least one vial per sample has zero headspace?	Yes ☐	No ☐	No VOA vials	☑
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers	☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐		
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA	☑

Any No responses must be detailed below or on the COC.

Custody seal(s) intact on shipping container/cooler.
